

# Life Sciences

## How we help the Life Sciences Industry

The UK's life sciences industry is thought to contribute around **£10 billion** to the national economy every year. Covering everything from pharmaceuticals to medical technology, its advances are crucial to the lives of people across the world.

Manufacturers working in this area don't have it easy, though. As the sector continues to evolve, companies are finding themselves up against a fresh set of obstacles – all of which are capable of restricting productivity.

### Perfection is paramount

Life sciences is a precise industry and strict quality standards must be upheld at all times. Every nuance has to be documented as the consequences of error are particularly serious.

### Legal regulation

As a result of the above, pharmaceutical companies must adhere with stringent legislation as laid out by the government and other regulating bodies. Moreover, these rules are constantly subject to change; being ready to adapt is imperative.

### Research and development

Research and development is more crucial to life sciences than to any other industry, but companies must ensure they're getting sustainable returns on their investments.

### Unconventional competition

Producers face competition, not only from others in the industry, but also from illegal, black market sellers. According to the World Customs Organisation, the global market for counterfeit drugs is worth close to \$200 billion.

These are the kinds of challenges that LYNQ can help you overcome. Our innovative software solutions have been developed to ensure mid-market manufacturers can fulfil their potential by improving operations in a number of ways:

- Increase shop-floor efficiency with the ability to attach any type of document to your jobs – including material lists, regulations and best practice information.
- Improve sustainability and reduce overheads by going paperless – replace physical documents and communications with online forms and messaging features.
- Measure quality in real-time using accurate data delivered directly from the shop floor; giving you the power to identify opportunities.
- Improve connectivity to gain complete visibility of employee and machine performance.

LYNQ's applications are already being used by manufacturers across the world.

Get in touch today to find out more about our software, and how it can help your business be more productive and more profitable. Email [sales@thinklynq.co.uk](mailto:sales@thinklynq.co.uk).
