

Machinery

How we help the Machinery Industry

Contrary to popular belief, the UK's manufacturing sector is still strong – employing more than **2.5 million** people and accounting for around **£150 billion** of national economic output. The industry's growth, however, relies heavily on the development and building of machinery.

This is a complex field, and machine manufacturers must overcome a unique set of challenges as they search for operational efficiency. Together, these challenges are enough to hinder planning and scheduling efforts, and ultimately restrict productivity.

Increasing global competition

The UK industry faces increasing competition from other parts of the world, where labour and materials can be considerably cheaper.

Constant innovation

Processes and relevant technologies are evolving rapidly as manufacturers strive for faster, smarter production. Machine-makers must ensure they keep up with all advances in order to remain relevant to their audiences.

Lengthy development process

The journey from initial design to completion is lengthy when it comes to machine production – numerous parts have to be developed and sourced, with many different companies involved.

Maintenance requirements

Machine building is an intensive process, and companies must consistently maintain the condition of their own machines to ensure quality levels remain high.

This is where LYNQ can help. Our range of ERP-enhancing software solutions have been developed with mid-market manufacturers in mind, to help them plan, schedule, execute and analyse effectively. Our solutions can improve your business's operations in a number of ways:

- Manage and avoid bottlenecks using the graphical planning board to identify and rectify issues before they impact production.
- Improve client satisfaction by providing your service team with complete visibility of the shop floor – making it possible to determine the status of each job instantly.
- Use real-time data from the shop floor to track employee and machine performance, and identify opportunities for improvement.
- Track OEE, availability, loading, quality and six loss using powerful, data-fuelled dashboards.

Our applications are already being used by manufacturers across all industries.

Get in touch today to find out more about our software, and how it can help your business be more productive and more profitable. Email sales@thinklynq.co.uk.
